

Reshaping Life Sciences

Building a compliant,
connected and intelligent future

The Life Sciences sector is transforming faster than ever.
Are all the pieces of your organisation moving with it?

In Life Sciences, every system needs validation, every data point needs to be traceable, every process needs to hold up under a GxP audit, and every operation needs to stay secure. That bar keeps rising, as AI, automation and increasingly connected labs, manufacturing and enter-

prise systems reshape how you work. Fixing one piece at a time isn't enough. Compliance, data, systems and patient safety all have to move together, or not at all. That's the challenge **Reshaping Life Sciences** solves.

1. The pillars that keep you ahead of change

Our commitment: to help you adapt faster, operate more effectively and innovate with confidence. These three pillars make that possible. They create the foundation of your future-ready Life Sciences organisation.

Compliant

You innovate without compromising quality, patient safety, data integrity or compliance.

Connected

Your people, processes, systems and data work together across the value chain, not in silos.

Intelligent

Trusted data, AI and automation help you decide better, innovate faster and perform stronger.

"In Life Sciences, speed only creates value when quality, data and trust move with it."

– Niels Verherstraeten, Director Life Sciences, Sopra Steria

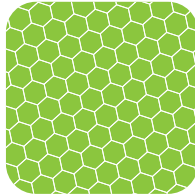

2. One connected journey, built to help you innovate faster

Investing in isolated efforts only goes so far. AI needs governed data. Connected manufacturing needs validated systems. Transformation needs integrated execution. At Sopra Steria, we help you connect these pieces from the start, so you can innovate faster, while maintaining trust, compliance and control. Our capabilities include:

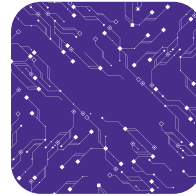

Strategy & Transformation

Turns strategic choices into real change across operating models, compliance, processes and technology, so you can turn ambition into action.

Quality & Compliance

Embeds GxP and quality requirements at every step, so you can innovate while staying compliant and audit-ready.

Data & GenAI

Turns trusted data into insights and AI value, so you can decide faster.

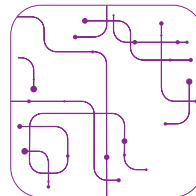

Enterprise & Supply Chain

Connects planning, procurement, manufacturing, quality, warehousing and distribution, so you can run one integrated, resilient and intelligent enterprise.

Cyber Resilience

Protects your systems, operations, IP and patient data, so you stay safe and running, even when disruption hits.

Reshaping Life Sciences

Together, these five capabilities move as one **connected engine**.

3. Let's move forward, together.

Sopra Steria combines Life Sciences expertise with strategy, quality, enterprise technology, data, AI and cybersecurity, all under one roof. That means, one connected partner, from ambition to compliant execution.

A reshaped organisation helps you to:

- **Innovate faster** without compromising compliance or control.
- **Run more connected, reliable and efficient operations.**
- **Stay audit-ready and future-ready** as your organisation evolves.
